_M	in MULTILINE Backup database	
	Interface Cours de change - Internet BCE XML Interface Historique Cours de change - Internet eCDF - Merge files	Export path (c:\temp\)
	Interface - EVAT Consolidation - (Multiple DB) - Cli/Fou/Titres BlackList - EEC	
	BlackList - US Treasury BlackList - UN BlackList - World check	·
	Import Factiva WatchList (Dow Jones) Blacklist checks Export account balance	

Footnotes in the annual returns:

Whenever a VAT return XML is generated DeMaSy is saving generated data which also are accessible through the interface in utilities.

This allows to add information to the return footnotes to the to the XML file before upload to eCDF platform. As VAT footnotes for annual return can't be extracted as such from the accounting ledgers when a user wants to add and fill in values in relation with the footnotes (annual return only) it will thus be possible to complete the generated file.
